

As springtime approaches, we are pleased to update you on the hard work and ongoing efforts of the Infrasonix team. As the team works toward the goal of revolutionizing areas of diagnosis within the medical community, we also continue to enhance the knowledge and depth of value of the Infrasonix brand.

Last fall Infrasonix assumed program leadership from the original inventor at NASA's Langley Research Center. This allows us to advance our research at a much faster rate whilst still enjoying the support of NASA at both the Langley and Kennedy research centers. Continuing our work with NASA gives Infrasonix access to critical technology support as well as patients from both NASA and VA facilities.

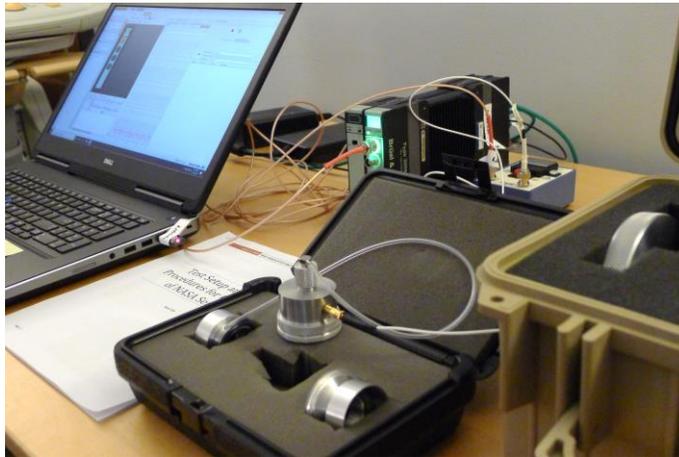

The Infrasonix team is growing. Last year Infrasonix added John Mitchell as Chief Technology Officer. John brings 20+ years' experience leading Research and Development (R&D) teams and commercializing new technology. John's responsibilities include building our research methodology and leading complex research work within Infrasonix and amongst our growing network of external research partners.

John's knowledge, experience and expertise will enhance our ability to move forward at the most rapid pace.

Late last year we initiated a plan to identify and engage leading researchers from around the world who bring capability, experience and passion to join our team. These relationships enhance our credibility and value as a dynamic player in our field and will help us create a new generation of diagnostic equipment.

Infrasonix has also begun an active search to locate institutions and research partners that can advance the pace of our research. For example, we visited the KTH Royal Institute of Technology in Stockholm Sweden, where advance research is underway in certain cardiac diseases where we believe the Infrasonix technology can prove beneficial in early cardiac disease detection.

We are very excited about the progress made in the last quarter of 2019. We are confident this progress has added to the reputation and thus the value of the Infrasonix brand. Since the beginning of 2020 the Infrasonix team has been engaged in many exciting advances and we look forward to updating you, our valued partners, on these and all activities on a regular quarterly basis.

Kind Regards,

John A. Leverett
