

THE MOVE IS COMPLETED

As 2021 arrived we found ourselves in our new space at the beautiful new Slingshot facility in Duluth GA. As you may remember Infrasonix has shared office and laboratory space with Slingshot Product Development Group in Georgia for some time now. This new facility in Duluth has afforded Infrasonix the opportunity to enter into a new agreement with our long-time technology partner Slingshot Product Development Group. This new agreement has afforded us the opportunity to develop a unique, state of the art acoustics lab for our ongoing research and development.

NEW ADDRESS

**3100 Breckinridge Boulevard
Suite 712
Duluth, GA 30096**

COVID 19

Sadly COVID 19 is still with us and yes, we are still working remotely for the most part and when we are in the office or the laboratory. we are still using the utmost care to follow state recommended procedures to keep all concerned safe and healthy. We plan to continue a primarily remote workplace with limited travel in the hopes we will be back to a more normal work environment in the months to come.

A VERY WELCOMING LOBBY.

This space will welcome both Slingshot and Infrasonix visitors as well contract workers that arrive to work on a multitude of projects.

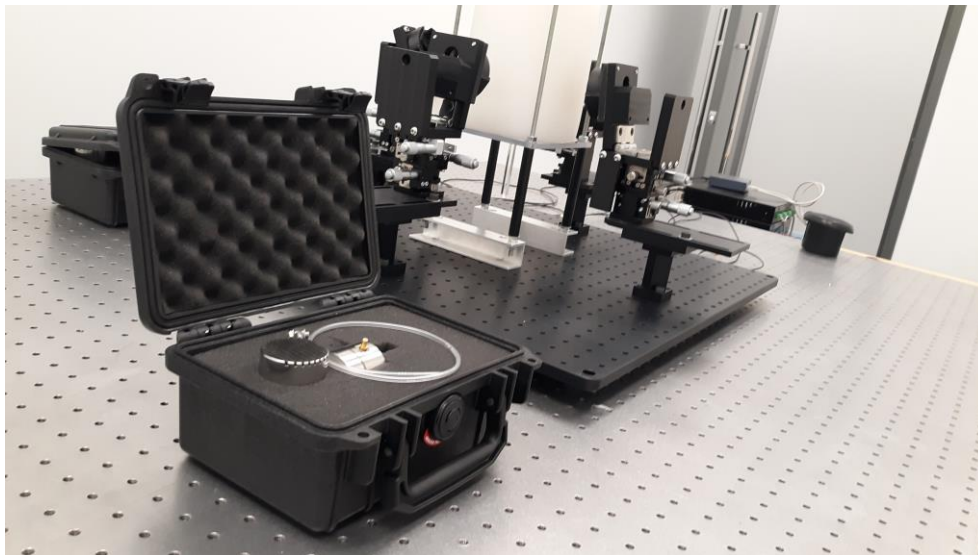

Ideas come to reality in the open work zone

Able to accommodate several experts as they work on multiple projects, this work zone may offer support to Infrasonix whilst its primary use will be Slingshot projects.

DATA DOWNLOAD IN THE NEW ACOUSTICS LAB

Anxious to move forward with our sensor test and confirmation through data compilation the new acoustic lab space is proving to be a vast improvement over our temporary lab set up at the old location.

PROTOTYPE INFRASCOPE BEING TESTED IN THE ACOUSTICS LAB.

We are well on our way with the latest generation sensor testing that is proving to be another leap forward in accuracy and sensitivity.
